Wind River VxWorks Platforms

The market for secure, intelligent, connected devices is constantly expanding. The key to successful products is to delight your users by matching exciting applications with outstanding hardware performance, all while delivering a high-quality product to market on time. To succeed, companies must optimize their device software across the entire product life cycle: from design through development, from QA to the remote management of deployed devices. They need a Device Software Optimization (DSO) solution that scales. VxWorks 6.6 introduces symmetric multiprocessing (SMP) support to make the promise of multicore processors real: high performance, lower costs, lower power consumption, faster time-to-market. The VxWorks 6.6 SMP add-on product is available for all VxWorks platforms.

The Wind River VxWorks platforms are complete, flexible, optimized COTS development and run-time platforms that work out of the box and across the enterprise. The platforms provide a powerful, scalable development and on-chip debugging environment built on open standards and industry-leading tools; the industry’s most trusted commercial-grade real-time operating system (RTOS); and tightly integrated run-time technologies. This proven technology package is backed by a 25-year track record, an exceptional ecosystem of hardware and software partners, and the industry’s most comprehensive support organization.

The Wind River VxWorks platforms are optimized develop-and-run solutions for a range of devices, from aerospace and defense (A&D) applications to networking and consumer electronics, robotics and industrial applications, precision medical instruments, and car navigation and telematics systems. The platforms provide a robust foundation for companies that need to leverage their investment in proprietary intellectual property. VxWorks has been deployed successfully in hundreds of millions of devices worldwide.

The Foundation: VxWorks 6.x

The VxWorks platforms are based on the world’s most widely adopted RTOS. Built on a highly scalable, deterministic, hard real-time kernel, VxWorks enables companies to scale and optimize their run-time environment using only the specific technologies required by their device. From the smallest footprint requirement to the highest performance level, VxWorks gives developers the flexibility to build their optimal solution quickly and easily while meeting cost, quality, and functionality requirements.

VxWorks supports POSIX and industry-standard protocols such as IPv6 and TIPC, ensuring maximum code portability and interoperability. VxWorks 6.x is backward-compatible with previous releases, so developers can leverage and reuse existing projects, applications, Board Support Packages (BSPs), and drivers, as well as open source applications. VxWorks 6 includes frameworks for file systems, power management, and

**Development Suite**

Wind River Workbench

**Software Partners**

| Ada Support | Advanced Flash Support | Advanced Security |
| Browsers | CAN | Common Internet File System |
| Databases | Design Tools | Graphics |
| High Availability | Java | Others |

**Additional Middleware**

| Wireless Ethernet | Mobile IPv4/IPv6 | RIP/RIPng | Media Library |
| SSL & SSH | IPSEC & IKE | NAT | Firewall |
| RADIUS Client | 802.1X, 802.11i | Security Libraries | Web Svcs-SEC |
| SNMP v1/v2/v3 | Web Server | CLI/MIBway | Learning Bridge |
| XML/SOAP | Web Svcs-Interop | DCOM | CAN/OPC |

**Base Middleware**

| TIPC | Distributed Shared Memory | USB 1.1, 2.0 |
| dosFs | Flash Support | Highly Reliable FS |
| IPv4/IPv6 Network Stack | | PPP |

**Operating Systems**

VxWorks/VxWorks SMP

**Hardware Partners**

Reference Designs, Semiconductor Architectures

**Services**

| Education Services and Installation | Platform Customization |
| System Design | Design Services |
| Hardware/Software Integration |

** Included in all VxWorks platforms
interconnectivity, as well as comprehensive security capacities that begin at the core operating system level for absolute application and device security.

VxWorks 6.6 SMP

Wind River VxWorks platforms can be enhanced with symmetric multiprocessing (SMP) capabilities within the operating system and development tools in order to provide the easiest path for device software developers to exploit the benefits of multicore. The multicore-enabling capability of the VxWorks platform is complemented by Wind River’s unmatched service and support capabilities.

VxWorks 6.6 SMP is offered as an optional add-on product to all the VxWorks 6.6-based platforms, with support for the latest market-leading multicore silicon. In addition, the VxWorks SMP-enabled platforms allow customers to:

- Deliver higher performance multicore-powered products with reduced risk and development investment.
- Speed time-to-market by using commercially available and supported run-time platforms and developer tools with support for multiprocessing.
- Enable a flexible design approach using Wind River’s expertise and broad technology support for multiprocessing.

Integrated Run-Time Technologies

VxWorks platforms include comprehensive networking and run-time technologies that have been preintegrated, tested, and validated. Leveraging these standard technologies saves development time and allows you to focus on adding value and differentiating functionality to your device.

Optimized Development Suite

The VxWorks platforms include the industry-leading Wind River Workbench development suite and Wind River Workbench, On-Chip Debugging Edition. From hardware and board initialization to application development, the suite offers deep capability across the development process in a single integrated environment, with complete platform integration and powerful tools for debugging, code analysis, and test. Wind River’s technology leadership in debugging multicore processors with its on-chip debugging solutions enables customers to quickly identify problems between hardware and software using a patent-pending multicore debugging technology. Based on the Eclipse framework, Workbench can be extended through in-house, third-party, open source, and commercial plug-ins.

Global Services and Support

VxWorks platforms include full access to worldwide, 24/7 product support through multiple channels. We offer industry-specific services practices; our teams have extensive experience delivering design, integration, and optimization services tailored to the needs of device software development.

A Proven and Reliable Partner

The right technology partner can greatly increase your ability to succeed in a highly competitive marketplace. As the industry leader in DSO, Wind River has met and exceeded the requirements of our customers and their markets for 25 years. More than 4,000 businesses have leveraged our skills, experience, and expertise to deploy and support more than 350 million devices successfully.

Extensive Partner Ecosystem

The Wind River partner ecosystem delivers the capabilities and expertise of dozens of premier silicon and software companies to your engineering team. Our partners provide such technologies as advanced file systems, level 2 and 3 networking protocols, advanced graphics, reference designs, and BSPs. VxWorks platforms take you out of the operating system and middleware business, and also simplify your vendor choice and management issues.

Flexible Business Models

Wind River complements the technical advantages of VxWorks platforms with a choice of proven business models. Under our Enterprise License Model, the platform is offered as an annual, per-developer subscription, applicable across the enterprise. The subscription includes Wind River support and all product updates. Our Perpetual License Model provides flexibility for companies desiring project-based licensing.

Platforms Available in VxWorks Edition

- Wind River General Purpose Platform
- Wind River Platform for Automotive Devices
- Wind River Platform for Consumer Devices
- Wind River Platform for Industrial Devices
- Wind River Platform for Network Equipment

VxWorks Platform Components

Develop: Wind River Workbench 3.0

- Eclipse framework
- Project System and Build System
- Editor and Source Code Analyzer
- Debugger
- Wind River Compiler and Wind River GNU Compiler
- VxWorks Simulator
- Host Shell and Kernel Shell
- Run-time analysis tools
  - System Viewer
  - Performance Profiler (formerly ProfileScope)
  - Memory Analyzer (formerly MemScope)
  - Data Monitor (formerly StethoScope)
  - Code Coverage Analyzer (formerly CoverageScope)
  - Function Tracer (formerly TraceScope)
- Optional add-ons
  - Wind River Workbench, On-Chip Debugging Edition
  - IPL Cantata++ for Wind River Workbench (formerly Unit Tester)
Run: Wind River VxWorks 6.6

- Backward compatibility with VxWorks 5.5 and all previous versions of VxWorks 6.x
- Memory protection
- Shared libraries and shared memory, distributed shared memory
- Message channels and TIPC
- Error management and power management frameworks
- Processor Abstraction Layer
- Operating system scalability
- Certified POSIX 1003.13-2003 PSE52 conformance; enhanced compliance to PSE 53, PSE 54, and 1003.1 standards
- Networking: TCP, UDP, IPv4/IPv6, PPP, and 802.11 drivers
- Routing: Policy-based routing, ECMP
- File systems: dosFs, TrueFFS, Highly Reliable File System (HRFS)
- VxMP
- VxWorks 6.6 SMP optional add-on product
  - Support for leading-edge multicore processors and boards
    - ARM11 MPCore (ARMv6)
    - Broadcom BCM1480
    - Cavium OCTEON CN38XX
    - Freescale MPC8641D
    - Dual-Core Intel Xeon processor LV
    - Intel Core Duo T2400
    - Raza XLR 732

Manage: Wind River Device Management (Optional Add-Ons)

- Wind River Field Diagnostics
- Wind River Lab Diagnostics
