

THE WORLD IS EVOLVING RAPIDLY WITH 5G

\$900B

IN THE NEXT 5 YEARS

Service providers are expected to invest over **\$900B worldwide in 5G network infrastructure in the next 5 years.** (GSMA)

80% of all data will be computed, near latency free, on the edge by 2025. (Gartner)

80%

OF ALL DATA WILL BE
COMPUTED ON THE EDGE BY
2025

Covid-19 has pushed over 70% of telco 5G projects onto a fast development and deployment track. (Wind River)

5G will add 8M+ towers globally.

THIS MEANS 3 SIMPLE TRUTHS

1

Service providers want to accelerate. **Transformational technologies are needed.**

2

5G networks will be distributed across thousands if not millions of nodes. **Complexity is inevitable.**

3

Service providers need to handle **complexity of volume, optimization, and OPEX controls.**

WHY WIND RIVER

Verizon's 5G edge network runs on Wind River Studio and other service providers will follow.

WIND RIVER STUDIO

Cloud Platform provides a production-grade Kubernetes platform for managing a distributed edge cloud infrastructure.

Analytics makes it possible to effectively manage a distributed cloud system by consuming and processing the data to produce meaningful insights for decision-making.

Conductor provides one platform to achieve complete end-to-end automation to scale from a handful to thousands of nodes in a geographically dispersed distributed environment.
