

PRIVATE TRAINING

Interested in a class dedicated to your team's needs? Wind River offers private training options to fit your requirements. Both standard and tailored training courses are offered in person or via Live Remote learning.

STANDARD TRAINING COURSES

You can schedule a class from our extensive catalog of professionally designed standard courses. Standard training courses provide the following:

- A broad exposure to Wind River products and technologies
- Detailed technical lectures and demonstrations that go beyond the technology overview to cover key concepts, techniques, and design-related topics
- Hands-on exercises that allow participants to experiment with the products and technologies
- All the materials and equipment for a successful learning experience
- Flexible scheduling

TAILORED TRAINING COURSES

If your team has specific training needs, we will work with you to tailor an agenda using topics found in our standard courses. You can combine, add, or eliminate topics from one or multiple courses. Tailored training courses provide the following:

- A learning experience focused only on the topics relevant to your specific project requirements and challenges
- Cost-effective and time-effective training, because all topics are centered on your areas of interest
- Detailed technical lectures and demonstrations that go beyond the technology overview to cover key concepts, techniques, and design-related topics
- Hands-on exercises that allow participants to experiment with the products and technologies
- All the materials and equipment for a successful learning experience
- Flexible scheduling

CUSTOM TRAINING COURSES

When you need a more customized training course specific to your hardware or want to deploy a course through your own training organization to a large team, we can help with our custom hardware and self-sufficiency programs.

Custom Hardware Training

Our professionally developed high-quality courseware can be ported to run on your own hardware. Your engineers gain relevant practice in class, using target boards you supply to perform exercises illustrating key concepts. This approach makes their classwork directly applicable to their jobs, with no “translation” from the hardware used in class.

Job-realistic training is most effective—so your engineers become productive faster.

Self-Sufficiency Training for Instructors

If you have your own training organization, you know how challenging and time consuming it can be to create detailed technical courseware. Developers spend time struggling to understand new products, writing lecture and demo materials, creating environments, and testing practices. With Wind River’s self-sufficiency program, you can save time and increase the quality of your in-house classes by purchasing the rights to use our leading-edge courseware to teach an unlimited number of employees. We provide a comprehensive service that includes training sessions for your instructors and easy-to-replicate hands-on practice environments.

Your organization becomes self-sufficient in conducting high-quality Wind River classes without spending the time and labor to develop your own courseware.
